

mist must be no bigger than 5µm to allow proper absorption into lungs. **Please ensure your nebulizer can nebulize colloidal silver.**

- * Using a fine mist spray nozzle, one can spray silver into the nostrils

Disclaimer

Jsingh's colloidal silver **does not** cause argyria (blueish-gray discoloration of the skin). Argyria is only caused by consuming over 16oz of colloidal silver per day over a long period of time. For more information please see the study "**A case of generalized argyria after ingestion of colloidal silver solution**" by Yangho Kim et. al."

Colloidal Silver is **not known** to cause damage to liver, kidney, brain and other organs once made of a high quality and taken as prescribed.

Products and statements have **not** been evaluated by the Food and Drug Administration and are **not** intended to diagnose, cure or prevent any disease.

"No studies of cancer or birth defects in animals from eating, drinking, or breathing in silver compounds were found. Therefore, it is not known if these effects would occur in humans. One study of animals who drank silver compounds mixed with water for most of their lives found no effect on fertility."

DEPARTMENT of HEALTH AND HUMAN SERVICES, Public Health Service Agency for Toxic Substances and Disease Registry, 1990. *"The authors reported that no morphological changes were detected in the lungs, heart or abdominal organs and that no significant changes were noted in pulmonary reactive oxygen species or pro-inflammatory cytokine generation. They saw no clinically important changes in human metabolic, haematologic, urine, physical findings or imaging morphology."* Munger et al. (2013) quoted in W.H.O., Centre for Research into Environment and Health, Silver: water disinfection and toxicity.

COLLOIDAL SILVER & CORONAVIRUS

"Beloved, I wish above all things that thou mayest prosper and be in health, even as thy soul prospereth." 3 John 2

What is a Coronavirus?

Coronaviruses are a family of viruses that contribute to infection of the upper respiratory system such as the nose, sinus and upper throat. There are many strains of coronaviruses such as SARS (Severe Acute Respiratory Syndrome), MERS (Middle Eastern Respiratory Syndrome), 229E and 2019-nCoV also known as the Wuhan Coronavirus, to name a few.

What to know about the 2019-nCoV aka Wuhan Coronavirus?

This virus is a novel coronavirus as there is none like it. According to the World Health Organization (WHO) this virus has an incubation period of 2-14 days. This means that a person infected with this coronavirus can shed (meaning spread) this virus to others without exhibiting symptoms. Some sources

have said that the incubation period can be even up to 30 days. The virus is airborne as it can be spread through sneezing, coughing and even by touching infected surfaces and then touching one's face, nostrils, mouth or eyes. Thus, it is important to have proper hand hygiene by frequently washing one's hands. Additionally, one must ensure that they have a strong immune system by getting enough vitamins and minerals, rest, adequate consumption of water and exercise. One way to strengthen one's immune system, apart from high doses of vitamin C, is by regular consumption of colloidal or nano silver.

How does Colloidal Silver work against viruses?

Colloidal silver works to hinder viral replication by attaching itself on the end of the virus. Thus, viral activity is inhibited and Viral DNA or RNA is prevented from entering the cell.

Will Colloidal Silver work for coronaviruses?

Yes, there are a multitude of studies showing that colloidal silver or nano silver is effective at destroying coronaviruses. In a study entitled "*Catalytic Inactivation of SARS coronavirus Escherichia coli and yeast on solid surface*" in 2003, a team of Chinese scientists found that in the presence of Ag (silver), "*the SARS coronavirus, bacteria and yeast are completely inactivated in 5 min on Ag catalyst surface.*" Furthermore, it was noted in a study entitled "*Viral Pathogens and Severe Acute Respiratory Syndrome: Oligodynamic Ag+ for Direct Immune Intervention*" that

silver can effectively work to denature any kind of SARS coronavirus mutations.

"Therefore no functional barrier to the virotoxic effects of oligodynamic Ag+ may be expected regardless of the rapidity or variety of mutations." This clearly shows that with the recent outbreak of this new coronavirus (2019-CoV), colloidal silver should without a doubt effectively be used to rid infected persons of the virus as well as be used as a preventative means from getting infection. In a July 2020 Israel study entitled, "*Formulations for COVID-19 Treatment via Silver Nanoparticles Inhalation Delivery*" showed that for common continuous nebulizers a "*dosage of 3.3ml needs to be continuously nebulized for inhalation by the user ...exhalation through the nose can be implemented as a method to deliver the exhaled fraction of NAgC (nano silver colloids) also to the nasal cavity when the nebulized inhalation is done orally...over a 5 day period...can be effective for prevention and treatment of any respiratory viral infections at early stages, including COVID-19 / SARS-CoV-2.*" Furthermore, in a Sept. 2020 Japanese study entitled, "*Potent antiviral effect of silver nanoparticles on SARS-CoV-2*" showed that silver nano particles "*of diameter around 10 nm were effective in inhibiting extracellular SARS-CoV-2 at concentrations ranging between 1 and 10 ppm.*"

How to use Colloidal Silver against coronavirus infection

- * Drink 1oz (2Tbsp) of 10ppm colloidal silver up to four times per day
- * Nebulize 3-4ml of colloidal silver into lungs, 3 times per day, for 15mins each time for 5 days if infected. Particles in
